

Cicero API

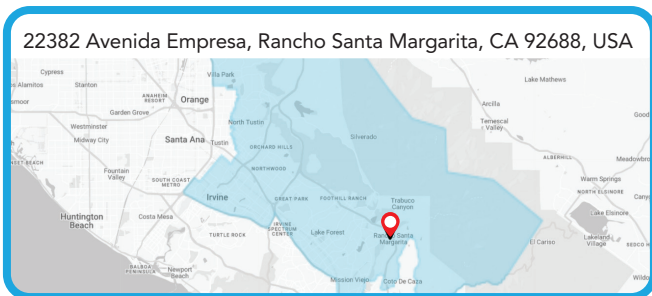

Cicero API is the most accurate set of elected official and legislative district data. It offers government and legislative district data on a national, regional and local level. Use it to offer elected official lookup tools to your customers or update your lists to guarantee you have correct districting when mailing or marketing. The possibilities are endless!

Cicero Features

- ✓ **Mapping and Geospatial Data:** Enjoy district matching at an address level, instead of a ZIP or ZIP+4® level like other providers. This ensures that you have the highest possible accuracy.

- ✓ **Elected Official Profile Data:** Go beyond standard name and contact information collection. With Cicero API, you will also receive the most updated social media profiles, websites, photos and biographies for elected officials. [Try Live!](#)

 Elected Local Officials
Supervisor
John Doe

What Makes Cicero Unique

Other congressional data providers only offer data specific to a ZIP Code or a ZIP+4® (which covers about 10-20 homes), but sometimes, two or more districts may be represented in these areas. Cicero API's district data is specific to an individual address to provide the most accuracy.

Cicero API monitors for out-of-cycle changes, and manually curates and verifies data as soon as an election is called. This means that Cicero API's data is available before other providers, including the USPS, giving you early access to accurate contact data on incoming officials. Changes to elected officials' contact information and other profile data is monitored and updated as well, so our data is always fresh.

How To Consume Cicero Data

- ✓ **Cicero API:** To harness the full power of Cicero data, check out the Cicero API. It's flexible and easy to integrate into any of your webforms, websites, programs and applications. It uses a credits-per-call system so you're only paying for what you need.
- ✓ **Melissa Products:** Basic Cicero congressional district data is available in select Melissa products, including on-prem Address and Geocoder Objects, Personator Web Service, and Global Address Web Service.

Coverage

Cicero API has data for over 450 cities in counties in the United States and Canada. Legislative data is also available for the United Kingdom, Germany, Australia and New Zealand. For a full list of government data coverage, make sure to check out our [coverage](#) resource.

About Melissa

Since 1985, Melissa has specialized in global intelligence solutions to help organizations unlock accurate data for a more compelling customer view. More than 10,000 clients worldwide in areas such as retail, education, healthcare, insurance, finance, and government, rely on Melissa data quality and ID verification software, including data matching, validation, and enhancement services to gain critical insight and drive meaningful customer relationships.
